

The RayGuard for harmonising electrosmog and geopathologies was tested with the following measuring methods, as a result of which a positive effect was significantly and reproducibly demonstrated.

Demonstration measuring methods:

- Cell experiments on human cells (Centro Nazionale di Ricerca Italian)
- PROGNOS system analysis (skin resistance measurements across 24 meridian end points – since 1994 applied in the space station MIR)
- Electro-acupuncture measurement according to Dr. Voll (double blind study)
- Computer decoder dermatography
- Bioelectronics according to Vincent
- Dark field microscopy
- Electrophysiological terminal point diagnosis
- OET test (optical erythrocytic test)
- ROTS test (blood sedimentation test)
- REDOX analysis
- Holopathy (Quint system for holistic medicine)
- Kirlian photography
- Aura photography
- Aschhoff blood test
- Kinesiology

Among the institutes that have tested the efficiency of the RayGuard products are:

ESK (CE certification)

A.I.M.O. (Associazione Internazionale di Medicina Ortomolecolare Dr. med. Adolfo Panfili)

Medicinal and building biology opinions:

Dr. med. Adolfo Panfili

Dr. med. Paul Gerhard Valeske (double blind experiment)

Dr. med. Manfred Doepp (nuclear physicist)
